

CORRESPONDENCE/MEMORANDUM

DATE: January 1, 2022

TO: Air Dispersion Modeling Community in Wisconsin

FROM: John Roth – AM/7

SUBJECT: PSD Minor Source Baseline Dates

The Prevention of Significant Deterioration (PSD) regulations were devised by the U.S. Environmental Protection Agency (USEPA) in order to permit "economic growth in a manner consistent with the preservation of existing clean air resources in areas such as national parks, national wilderness areas, national monuments, national seashores, and other areas of special national or regional natural, recreational, scenic, or historic value" (Clean Air Act, 1977). The intent of the program is to protect pristine and scenic areas of the country by limiting the amount of additional pollution affecting an area to values less than the National Ambient Air Quality Standards (NAAQS).

The program uses an "increment" system for sulfur dioxide (SO_2), nitrogen dioxide (NO_2), and particulate matter (PM_{10} & $\text{PM}_{2.5}$) with different increment values in different areas depending on the degree of protection required. There are three possible area classifications under the PSD program – Class I, Class II, and Class III. Class I areas allow the least amounts of air quality deterioration while Class III areas allow greater deterioration but never to the extent that public health is threatened. Almost all of Wisconsin is designated as Class II with the exception of the Rainbow Lake Wilderness Area in Bayfield County and portions of the Forest County Potawatomi Community lands in Forest County.

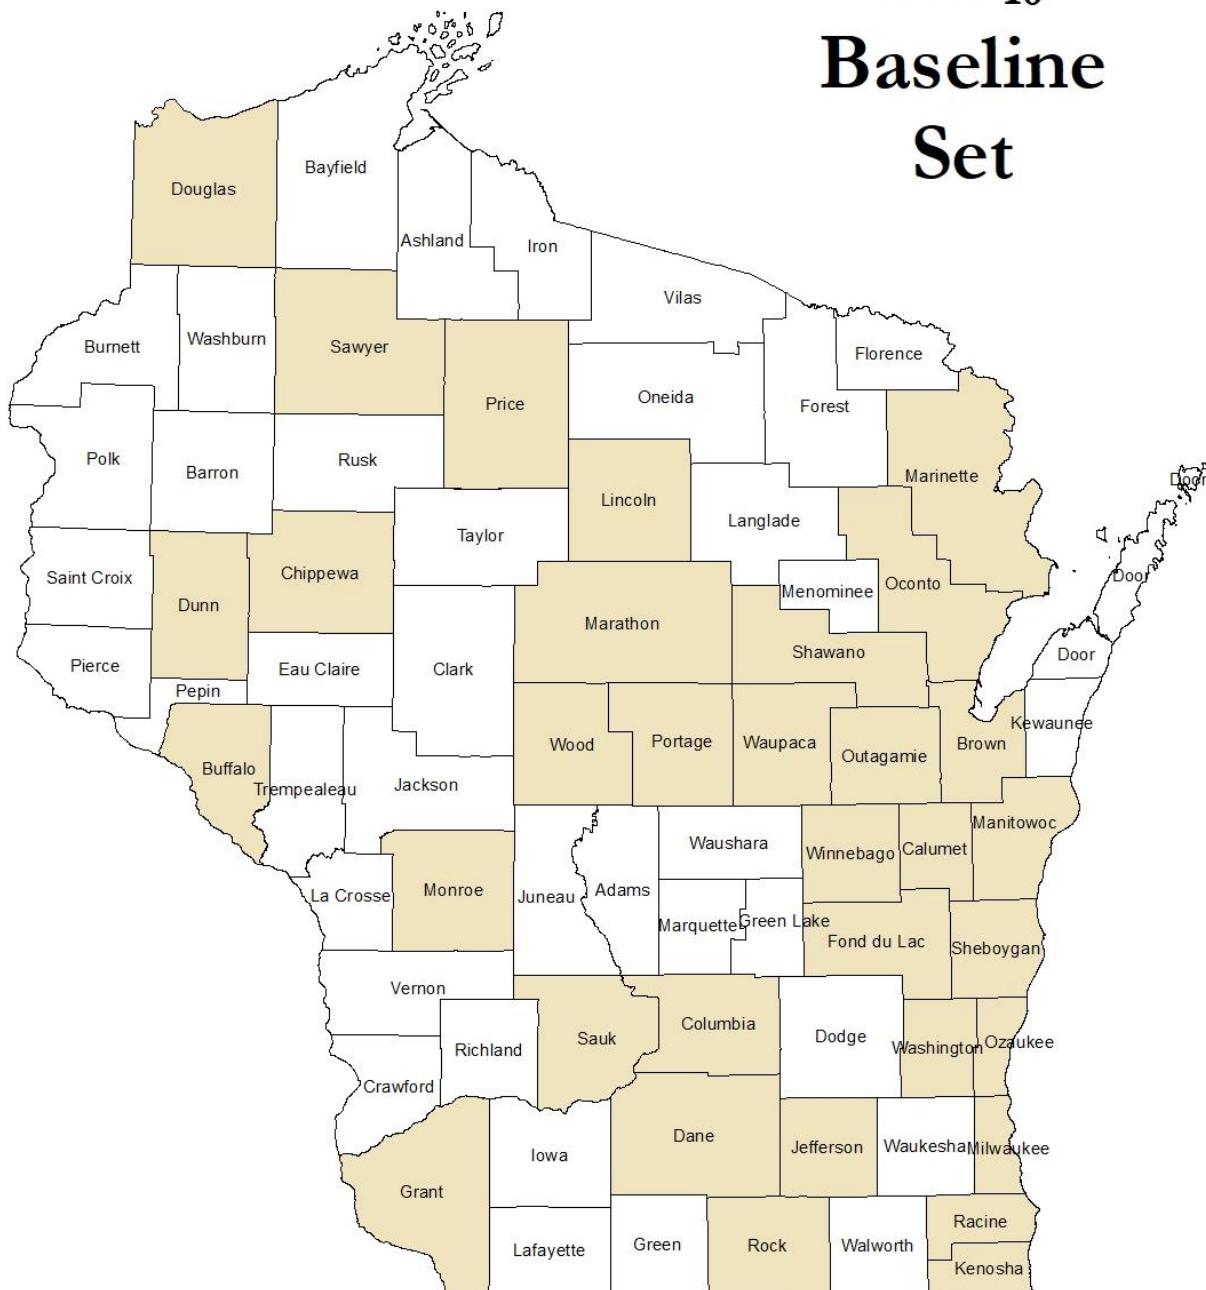

For each pollutant, once beyond the major source baseline date and the trigger date, the date of the first complete PSD application sets the minor source baseline date in the area. There is a facility in Dane County and another facility in Marathon County that began construction after the major source baseline date for $\text{PM}_{2.5}$. Any facility applying for a PSD permit for $\text{PM}_{2.5}$ in either county should consult with Air Program modeling staff.

In Wisconsin, minor source baselines are set in the county of the applicant and in any surrounding counties if the modeled air quality impact of the project is above significant impact levels. Using the county for baselines is consistent with federal attainment designation areas.

The following table and maps detail the minor source baseline dates and counties in Wisconsin.

PSD MINOR SOURCE BASELINE DATES						January 2022	
PM _{2.5}		PM ₁₀		SO ₂		NO _x	
Date	County	Date	County	Date	County	Date	County
