

Predictive Models for Microbial Water Quality: A Selection of Useful References

Compiled by **Adam C. Mednick**, Bureau of Science Services

Presented below is a list of recent journal articles and technical documents that discuss statistical models for predicting beach water quality. These articles provide a scientific foundation for the development and testing of predictive beach water quality models.

Science Services Center for Excellence – providing expertise for science-based decision-making

We develop and deliver science-based information, technologies, and applications to help people make well-informed decisions about natural resource management, conservation, and environmental protection.

Our Mission: The Bureau of Science Services supports the Wisconsin Department of Natural Resources and its partners by:

- conducting research and acquiring original knowledge.
 - analyzing new information and emerging technologies.
 - synthesizing information for policy and management decisions.
 - applying the scientific method to the solution of environmental and natural resources problems.
 - providing science-based support services for department initiatives.
 - collaborating with local, state, regional, and federal agencies and academic institutions in Wisconsin and around the world.
