

## PUBLIC NOTICE OF FIVE-YEAR REVIEW OF THE SAUK COUNTY LANDFILL SUPERFUND SITE

The Wisconsin Department of Natural Resources (DNR) and U.S. Environmental Protection Agency (EPA) complete a review for the Sauk County Landfill Superfund Site (the Site) located at E8975 Evergreen Lane, Baraboo every five years. The review ensures the continued effectiveness of remedies at the site. This is the sixth review since the completion of construction work in the 1990s. The last five-year review was completed in 2020.

As part of the review, federal law requires the DNR and the EPA to provide the public with an opportunity to comment about the landfill and the on-going cleanup process.

The landfill operated from 1973 to 1983 and received municipal, commercial, and industrial wastes. To address groundwater contamination from volatile organic compounds (VOCs) originating from materials disposed of in the landfill, the cleanup remedies included capping the landfill, landfill gas collection, and testing of private water supply wells.

Today, Sauk County maintains the landfill cap and fencing to prevent direct contact to waste material. Monitoring of groundwater wells evaluate contaminant migration and groundwater use restrictions in the immediate area protect the public from using contaminated groundwater.

The DNR invites interested parties to provide information that may be important to the review. Comments submitted by **May 16, 2025**, to one of the contacts listed below will be considered during the review process. The five-year review report will be completed in September 2025.
