LODs

The Whats, The Whys, and The Hows!

Patty Doerflinger
Autumn Farrell

October 23, 2024

Disclaimer

This presentation is to try to help you understand LODs.

Exact definitions and technical jargon have been avoided.

There is a lot more to the LOD determination that likely does not apply to this audience's testing, so it will not be covered here.

WISCONSIN DEPARTMENT OF NATURAL RESOURCES | DNR.WI.GOV

Why do we need an LOD?

- It is always possible that the analyte is present in the sample at a concentration below your LOD, so it's important that your LOD is low enough for the intended use of the data.
 - For example, if your permit limit is 0.075 mg/L for phosphorus, and your LOD for is 0.1 mg/L, then you know that your analysis is inadequate. You could have a “<LOD” result and the sample result would still not meet permit limits.
 - If your LOD is 0.05 mg/L, then a “<LOD” result indicates that the sample result is in compliance with your permit.

How do we determine the LOD?

“Initial” LOD

Do NOT redo the initial LOD unless needed. Only do the initial LOD when:

- you change methods.
 - For example: the lab changed from ammonia by ISE to Hach Test N Tube.
- a significant change has occurred that could affect sensitivity.
 - For example: the lamp was replaced in the spectrophotometer which may cause a significant change in sensitivity.
- the spiked blank concentration is changed.
 - For example: the lab changed the quarterly spiked blanks from 0.5 mg/L to 0.1 mg/L

How do we determine the LOD?

“Initial” LOD

Prepare and analyze at least:

7 spiked blanks on at least 3 different days

and

7 method blanks on at least 3 different days

Collect the Data

Enter the Data

LOD/LOQ Calculation and Validation Worksheet (Single Instrument) [Version 6/30/23]

Use this form if:
- a new method is implemented.
- a significant change has occurred and an initial LOD must be performed again.
- the spiked blank concentration is changed.

Spike Level: _____ mg/L
Average: _____
Standard Deviation: _____
Student's t-value to use: _____
Calculated LOD_s: <7 Spk Blks mg/L

Average: _____
Standard Deviation: _____
Student's t-value to use: _____
Calculated LOD_s: <7 MBs mg/L

Calculated LOD: NA mg/L (calculated from the greater of LOD_s and LOD_b)
Calculated LOQ*: NA mg/L (= 10/3 x LOD)

Were outliers rejected? _____ (only obvious failures may be excluded)
If so, explain: _____

NOTES:
*Only use data associated with passing calibrations and passing batch QC (reported data).
*The 2019 NR 149 code requires the LOQ to be 10/3 the LOD or at the concentration of the lowest standard in the initial calibration.

LAB NOTES:

Initial LOD | Ongoing Year 1 (Initial+Year1) | Ongoing Year 2 (and beyond) | NOTES

“Ongoing” LOD

How do we determine the LOD?

Prepare and analyze at least:

2 spiked blanks every quarter in separate batches

and

Usual method blanks

Collect the Data

Have some system to remind yourself to do these each quarter.

Be sure the spiked blanks are in separate batches or different days each quarter.

You don't need to do any special LOD method blanks.

“Ongoing” LOD

How do we determine the LOD?

Every year,
calculate and
assess the LOD.

Which data?

Always use the last 24 months of spiked blanks.

ONLY include the initial LOD data if it is was done within the last 24 months.

Ideally, use all method blank (MB) data from last 24 months.

If you have a LOT of MB data, you also have the option to use whichever of these that [provides more data](#): at least the last 6 months of MBs or at least the 50 most recent MBs.

Collect
the
Data

2 spiked

7/19/25	-0.01300

Ideally, use all MB data from last 24 months.

“Ongoing” LOD

How do we determine the LOD?

"Ongoing" LOD

Assessment

How do we determine the LOD?

Every year,
calculate
and assess
the LOD.

Calculated LOD:	0.023	mg/L	(calculated from the greater of L
Calculated LOQ*:	0.077	mg/L	(= 10/3 x LOD)
Existing LOD:	0.019	mg/L	
Can the existing LOD be left unchanged?	YES		
Is spike level okay (<5% spiked blanks <0)?	YES		

If the new LOD is close enough to the existing LOD (and most method blanks are <LOD), you can continue to use the existing LOD.

If the new LOD is not close enough to the existing LOD (or too many method blanks are >LOD), you MUST use the new LOD.

Calculated LOD:	0.043	mg/L	(calculated from the greater of L
Calculated LOQ*:	0.142	mg/L	(= 10/3 x LOD)
Existing LOD:	0.019	mg/L	
Can the existing LOD be left unchanged?	NO		
Is spike level okay (<5% spiked blanks <0)?	YES		

Use the new calculated LOD.

WISCONSIN DEPARTMENT OF NATURAL RESOURCES | DNR.WI.GOV

Watch for red alerts.

If you're sure you are just using the last 2 years of data, check for typos.

“Ongoing” LOD

Tips

How do we determine the LOD?

When you do the annual LOD calculation, fill in that date:

Ongoing LOD/LOQ Calculation and Verification Worksheet (Single Instrument) [Version 8/21/23]			
Facility:	Acme Labs		
Analytical Method:	SM 4500-P E	Calculation Date (Annual LOD):	12/15/2024
Matrix:	Wastewater	Calculation by Analyst:	ARF

Even though you do parts of the LOD determination each quarter, you only need to do the calculation and verification once per year. That is an important date to record.

"Ongoing" LOD

Tips

How do we determine the LOD?

If you set up a spreadsheet for the next year, you may put a reminder here:

Ongoing LOD/LOQ Calculation and Verification Worksheet (Single Instrument) [Version 8/21/23]			
Facility:	Acme Labs		
Analytical Method:	SM 4500-P E	Calculation Date (Annual LOD):	(DUE Dec 2025)
Matrix:	Wastewater	Calculation by Analyst:	

If you set up a spreadsheet for the next year, also be sure to update (if needed) or enter the existing LOD:

Calculated LOD:	0.023	mg/L	(calculated from the greater of LOD _s and LOD _b)
Calculated LOQ:	0.077	mg/L	(= 10/3 x LOD)
Existing LOD:		mg/L	
Can the existing LOD be left unchanged?	NO		Use the new calculated LOD.
Is spike level okay (<5% spiked blanks <0)?	YES		

“Ongoing” LOD

Tips

How do we determine the LOD?

When getting ready to enter data for the next year...

Before you delete any data, be sure to save a copy. You need to keep the data used to calculate the annual LOD.

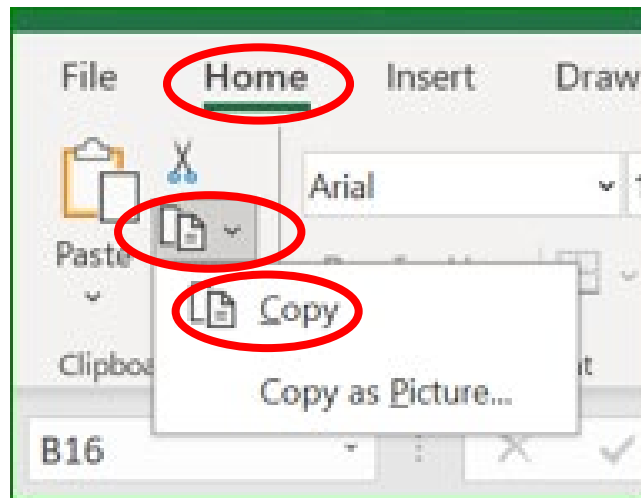

- When you’re done doing the annual calculation, enter the date on the spreadsheet.
- File, “Save” the current LOD spreadsheet (e.g., “Phos 2024”).
- File, “Save As...” and rename the LOD spreadsheet for the next year (e.g., “Phos 2025”).
- In the new spreadsheet (e.g., “Phos 2025,”) delete the data that will be more than 2 years old (e.g., from 2023). Delete all spiked blanks and method blanks that will be more than 2 years old.

“Ongoing” LOD

Tips

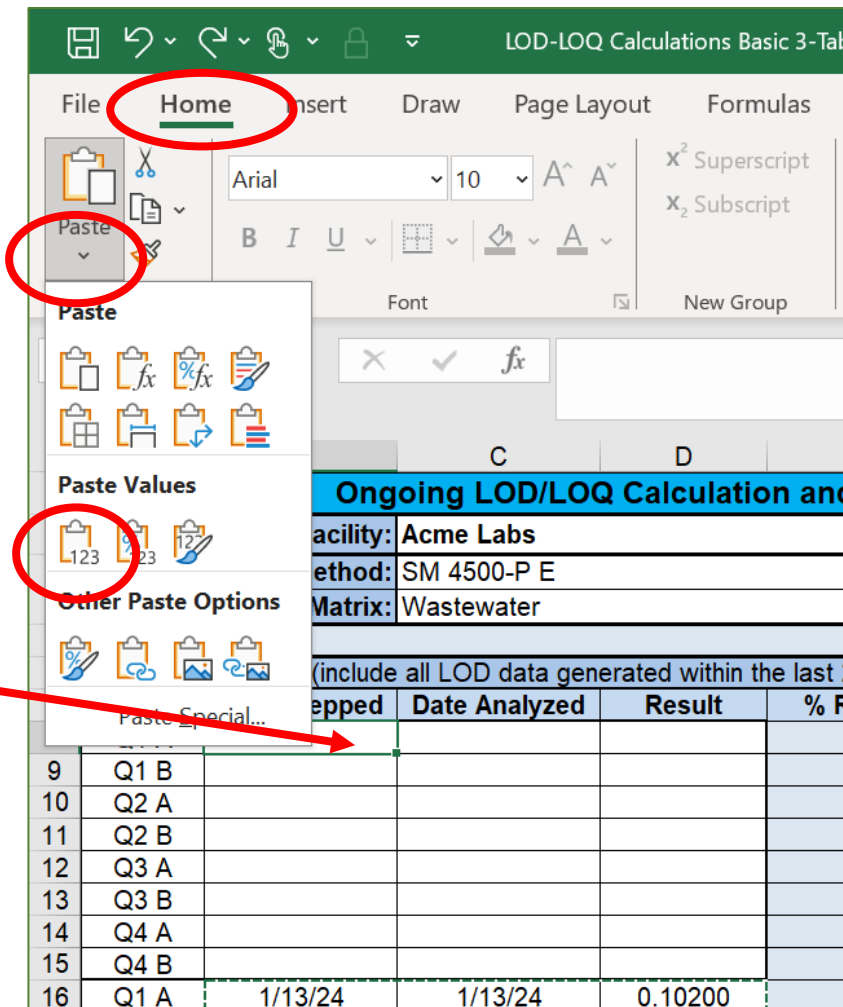

How do we determine the LOD?

1. To copy cells and move them in Excel, select the cells you want to move (click and drag), select **Home > Copy** (or Ctrl + C).

This method will keep the formatting the same. There are other ways of doing the same thing.

2. Then select the upper left cell where you want to paste the data.
3. Then, **Home > Paste >** drop down arrow, and **> Values (V)**.
4. Delete the duplicate data.

A screenshot of the Microsoft Excel ribbon, specifically the 'Home' tab. The 'Home' tab name is circled in red. Below it, the 'Paste' group is visible, and the 'Paste' button is circled in red. A red arrow points from the 'Paste' button towards the right side of the slide. Below the ribbon, a table is visible with columns for 'Sample ID', 'Date Analyzed', 'Result', and '% F'. The table contains data for various samples, including Q1 B, Q2 A, Q2 B, Q3 A, Q3 B, Q4 A, Q4 B, and Q1 A. The Q1 A row shows a date of 1/13/24 and a result of 0.10200.

Sample ID	Date Analyzed	Result	% F
9 Q1 B			
10 Q2 A			
11 Q2 B			
12 Q3 A			
13 Q3 B			
14 Q4 A			
15 Q4 B			
16 Q1 A	1/13/24	1/13/24	0.10200

“Ongoing” LOD

Tips

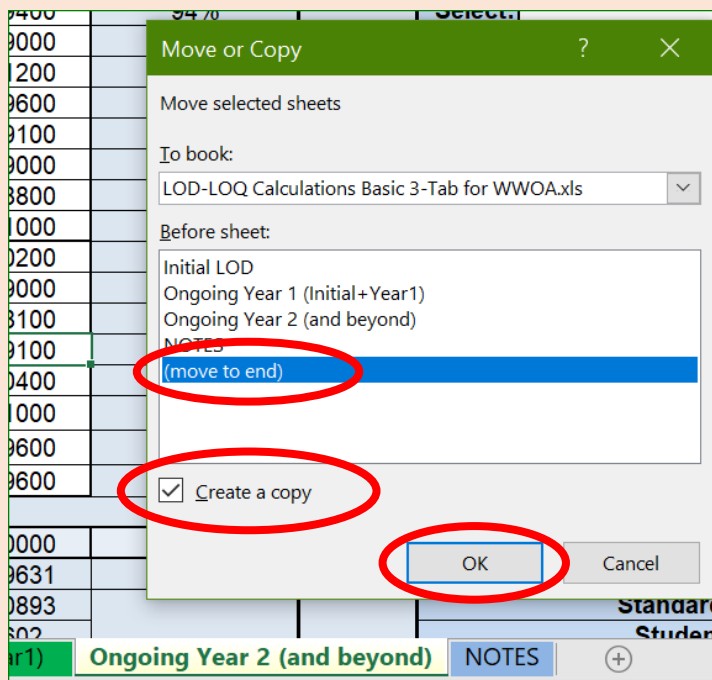

How do we determine the LOD?

1. To copy a tab in Excel, right-click on the “Ongoing Year 2 (and beyond)” tab. Select “Move or Copy...”

25	4/12/25	0.11200	112%
25	4/19/25	0.09600	96%
