**Area 5 - Big Arbor Vitae Loamy Hills - Forest Production**

Stand 1 (175 Acres) is comprised of well stocked 50 year old aspen poletimber with associated white birch, red maple, balsam fir and oak poletimber. Some higher stocked clumps of red and white pine sawtimber are also scattered throughout. The goal is to maintain aspen as a strong component across the landscape. The aspen will be regenerated via a coppice with standards forest treatment.

Stand 7 (17 Acres) is a well stocked 104 year old stand of red oak sawtimber over northern hardwood poletimber. This stand will receive a shelterwood harvest at this time to regenerate the red oak.

Stand 8 (14 Acres) is a well stocked northern hardwood stand which will receive a thinning at this time to promote stand health and vigor.

Biomass harvesting is allowed. There is a good network of woods roads and snowmobile trails in the proposed forest management area. There is also good access to Vandercook Road.
