Area 6 - Oneida Sandy Plains - Forest Production Area

Stands 2 & 10 (84 Acres) are comprised of well stocked red pine small sawtimber. Stand ages range from 67 to 91 years old. These stands were thinned in the past with the most recent thinning taking place in 2015. These stands are well stocked at this time. The prescription for these stands will be an improvement thinning following the standard order of removal to reduce stocking levels and promote the growth and vigor of remaining crop trees.

Stand 5 (32 Acres) is comprised of a good stocking of 115 year old black spruce poletimber. The prescription for this stand will be to patch or group clearcut relying on adjacent seed trees to regenerate the stand.

Biomass harvesting is not allowed. There is good access to Hwy 47.
